

Chapter F

Mechanics

8/10

F1 Force and Momentum

In these questions ignore the effects of friction & drag.

- F1.1 What is the momentum of a 750 kg car going at 31 m s^{-1} ?
- F1.2 What is the momentum of an electron (mass = $9.1 \times 10^{-31} \text{ kg}$) travelling at $3.0 \times 10^7 \text{ m s}^{-1}$?
- F1.3 If a 20 000 kg bus accelerates from 10 m s^{-1} to 25 m s^{-1} , what is the change in momentum?
- F1.4 A 50 g ball is travelling at 2.0 m s^{-1} when it hits a wall and rebounds at 1.5 m s^{-1} . Calculate the change in momentum.
- F1.5 A 750 kg car takes 15.3 s to accelerate from 5.0 m s^{-1} to 31 m s^{-1} . Calculate the force needed to do this.
- F1.6 A 70 kg person jumps in the air and is travelling downwards at 2.0 m s^{-1} when their feet touch the ground. If it takes the person 0.30 s to stop, calculate the resultant force on them.
- F1.7 I am trying to push start a car which has stopped. If the biggest force with which I can push the car is 420 N, and the car has a mass of 1025 kg, how fast will it be going after 8.0 s of pushing?
- F1.8 Calculate the force needed to accelerate a 50 000 kg spacecraft from rest to 7000 m s^{-1} in four minutes.
- F1.9 An alpha particle (mass = $6.7 \times 10^{-27} \text{ kg}$) is fired at the nucleus in a gold atom with a speed of $3.5 \times 10^6 \text{ m s}^{-1}$. It bounces off at the same speed in the opposite direction. If the collision takes 10^{-19} s , what is the average force?
- F1.10 How long would it take a 637 N force to accelerate a 65 kg physics teacher from rest up to a speed of 100 m s^{-1} ? (NB this is over 200 mph)
