# Complex Numbers

Further A

## Part A De Moivre

The complex number  $2 + i\sqrt{5}$  can be expressed in the form  $r(\cos \theta + i \sin \theta)$  where  $-180^\circ < \theta < 180^\circ$ .

Find  $r$ .

The following symbols may be useful:  $r$

---

Find an expression for  $\tan \theta$ .

The following symbols may be useful:  $\tan()$ ,  $\theta$

---

## Part B Square roots

Use an algebraic method to find the square roots of the complex number  $2 + i\sqrt{5}$  in the form  $x + iy$ .

Give an expression for the solution with positive  $x$  and positive  $y$ .

The following symbols may be useful:  $i$

---

Give an expression for the solution with negative  $x$  and negative  $y$ .

The following symbols may be useful:  $i$

---

## Part C A complex quartic

Using your answer from the previous part, find the roots of the equation  $z^4 - 4z^2 + 9 = 0$  in the form  $x + iy$ .

Give an expression for the root with both  $x$  and  $y$  positive.

The following symbols may be useful:  $i$ ,  $z$

---

Give an expression for the root with positive  $x$  and negative  $y$ .

The following symbols may be useful:  $i$ ,  $z$

---

Give an expression for the root with negative  $x$  and positive  $y$ .

The following symbols may be useful:  $i$ ,  $z$

---

Give an expression for the root with negative  $x$  and negative  $y$ .

The following symbols may be useful:  $i$ ,  $z$

---

## Part D Argand diagram

Sketch the roots of the equation from the previous part on an Argand diagram.

Easier question?

---

## Part E    Complex locus

Given that  $\alpha$  is the root of the equation in part C) such that  $0 < \arg \alpha < \frac{1}{2}\pi$ , sketch on the same Argand diagram the locus given by  $|z - \alpha| = |z|$ .

# Roots of Polynomials

A Level

This question is about manipulation of the roots of two polynomials.

$$x^2 + kx + 2k = 0$$

has the roots  $\alpha$  and  $\beta$ , while

$$x^3 + 4x + 3 = 0$$

has the roots  $\alpha'$ ,  $\beta'$  and  $\gamma'$ . Take  $k \neq 0$ .

## Part A Roots of the quadratic

Find a quadratic equation with roots  $\frac{\alpha}{\beta}$  and  $\frac{\beta}{\alpha}$ .

The following symbols may be useful:  $k$ ,  $x$

## Part B Substitution

Starting from the cubic equation above, use the substitution  $x = \sqrt{u}$  to obtain a cubic equation in  $u$ .

The following symbols may be useful:  $u$

## Part C Roots of the cubic

Find an expression for  $\alpha'^4 + \beta'^4 + \gamma'^4 + \alpha'\beta'\gamma'$ .

Adapted with permission from UCLES, A Level, June 2008, Paper 4725, Question 8 and June 2015, Paper 4725, Question 10.

# Vectors

A Level

c

c

c

The vector  $\mathbf{u} = \frac{3}{13}\mathbf{i} + b\mathbf{j} + c\mathbf{k}$  is perpendicular to the vector  $\mathbf{v} = 4\mathbf{i} + \mathbf{k}$  and to the vector  $\mathbf{w} = 4\mathbf{i} + 3\mathbf{j} + 2\mathbf{k}$ .

Part A    $c$

Find  $c$  as a single rational fraction.

The following symbols may be useful:  $c$

Part B    $b$

Find  $b$  in exact form.

The following symbols may be useful:  $b$

Part C    $|\mathbf{u}|$

Find  $|\mathbf{u}|$ .

Part D   Angle between  $\mathbf{v}$  and  $\mathbf{w}$

Calculate, to the nearest degree, the angle between  $\mathbf{v}$  and  $\mathbf{w}$ .

## Part E **n**

Find a unit vector **n** in the direction of the common perpendicular to the vectors  $(3\mathbf{i} - 2\mathbf{j} + 2\mathbf{k})$  and  $(-\mathbf{i} + 3\mathbf{j} - 5\mathbf{k})$ . Take **n** to have positive  $x$ ,  $y$  and  $z$ .

Find the  $x$  component of **n** as a single fraction.

The following symbols may be useful:  $x$

---

Find the  $y$  component of **n** as a single fraction.

The following symbols may be useful:  $y$

---

Find the  $z$  component of **n** as a single fraction.

The following symbols may be useful:  $z$

---

## Part F Two lines

Determine whether the lines described by

$$\mathbf{r}_1 = (1 + 2\lambda)\mathbf{i} - \lambda\mathbf{j} + (3 + 5\lambda)\mathbf{k}$$

and

$$\mathbf{r}_2 = (\mu - 1)\mathbf{i} - (5 - \mu)\mathbf{j} + (2 - 5\mu)\mathbf{k}$$

are parallel, intersect or are skew.

- ☐ Intersect
- ☐ Skew
- ☐ Parallel
-

# Sequences

A Level

The sequence  $u_1, u_2, u_3 \dots$  is defined by  $u_1 = 3$  and  $u_{n+1} = 3u_n - 2$  for  $n \geq 1$ .

## Part A $u_2$ and $u_3$

Find  $u_2$ .

The following symbols may be useful:  $u_2$

---

Find  $u_3$ .

The following symbols may be useful:  $u_3$

---

## Part B $\frac{1}{2}(u_4 - 1)$

Find  $\frac{1}{2}(u_4 - 1)$ .

---

## Part C $u_n$

Hence, find an expression for  $u_n$  and prove it with induction.

The following symbols may be useful:  $n$ ,  $u_n$

---

## Part D Divisibility

Prove by induction that  $5^n - 2^n$  is divisible by 3 for all integers  $n \geq 1$ .
