

Functions and Algebra 3i

The functions f and g are defined for all real values of x by

$$f(x) = |2x + a| + 3a \quad \text{and} \quad g(x) = 5x - 4a,$$

where a is a positive constant.

Part A Range

Find the range of $f(x)$.

What form does your answer take? Choose from the list below, where c and d are constants and $c < d$, and then find c and/or d .

- ☐ $y < c$
- ☐ $y \leq c$
- ☐ $y > c$
- ☐ $y \geq c$
- ☐ $c < y < d$
- ☐ $c \leq y \leq d$
- ☐ $y < c$ or $y > d$
- ☐ $y \leq c$ or $y \geq d$

Write down the value of c (in terms of a).

The following symbols may be useful: a , c

Write down the value of d (or if your chosen form has no d , write "n").

The following symbols may be useful: a , d , n

Part B Inverse function of $f(x)$

State why $f(x)$ has no inverse.

Easier question?

Part C Inverse function of $g(x)$

Find an expression for $g^{-1}(x)$.

The following symbols may be useful: a , g , x

Part D Solve for x

Solve for x the equation $g(f(x)) = 31a$.

Give the value of x furthest from 0.

The following symbols may be useful: a , x

Give the value of x that is closest to 0.

The following symbols may be useful: a , x

Function Types and Inverses

A Level

Figure 1 shows five different graphs, A, B, C, D and E, each for values of x such that $-a \leq x \leq a$ where a is a constant.

Figure 1: The set of five graphs, labelled A, B, C, D and E

Part A Function

Which diagram does not show the graph of a function?

- ☐ A
- ☐ B
- ☐ C
- ☐ D
- ☐ E

Part B **One-to-one Function**

Which diagram shows the graph of a function that is not one-to-one?

- ☐ A
- ☐ B
- ☐ C
- ☐ D
- ☐ E

Part C **Inverses**

It is given that two of the diagrams illustrate functions that are inverses of each other. Identify one of these two diagrams.

- ☐ A
- ☐ B
- ☐ C
- ☐ D
- ☐ E

Part D Sketch

The graph in E has equation $y = f(x)$. Sketch the graph of $y = |f(x)|$.

To prevent any sharp changes in your curve from being smoothed out, sketch your curve as two sections.

Combined Transformations

A Level
P P P

The function f is defined by $f(x) = \sqrt{mx + 7} - 4$, where $x \geq -\frac{7}{m}$ and m is a positive constant. **Figure 1** shows the curve $y = f(x)$.

Figure 1: The curve $y = f(x)$

Part A Translation of the curve $y = \sqrt{x}$

A sequence of transformations maps the curve $y = \sqrt{x}$ to the curve $y = f(x)$. Give details of these transformations.

Available items

Translate the curve 4 units in the negative y direction.

Translate the curve 7 units in the positive x direction.

Stretch the curve in the y direction by a factor of $\frac{1}{m}$.

Translate the curve 4 units in the negative x direction.

Translate the curve 4 units in the positive y direction.

Stretch the curve in the x direction by a factor of m .

Stretch the curve in the x direction by a factor of $\frac{1}{m}$.

Translate the curve 7 units in the negative x direction.

Translate the curve 7 units in the negative y direction.

Part B $f^{-1}(x)$

Find an expression for $f^{-1}(x)$.

The following symbols may be useful: f , m , x

Part C Values of m

It is given that the curves $y = f(x)$ and $y = f^{-1}(x)$ do not meet. Thus it can be deduced that neither curve meets the line $y = x$. Hence determine the set of possible values of m , and give the upper bound in the form $m < a$ or $m \leq a$.

The following symbols may be useful: $<$, \leq , $>$, \geq , m

Give the lower bound in the form $m > a$ or $m \geq a$.

The following symbols may be useful: $<$, \leq , $>$, \geq , m

Used with permission from UCLES A-level Maths papers, 2003-2017.

The function f is defined for all real values of x by

$$f(x) = k(x^2 + 4x)$$

where k is a positive constant. **Figure 1** shows the curve with equation $y = f(x)$.

Figure 1: The graph of $y = f(x)$

Part A Transformations

The curve $y = x^2$ can be transformed to the curve $y = f(x)$ by the following sequence of transformations

a translation parallel to the x -axis,

a translation parallel to the y -axis,

a stretch.

Give details, in terms of k where appropriate, of these transformations.

Give the number of units that the curve is translated in the x direction, assuming right to be positive.

The following symbols may be useful: k

Give the number of units that the curve is translated in the y direction, assuming up to be positive.

The following symbols may be useful: k

Give the stretch factor of the transformation.

The following symbols may be useful: k

Part B Range

Find the range of $f(x)$ as a single inequality in terms of k .

The following symbols may be useful: $<$, $<=$, $>$, $>=$, f , k , x , y

Part C $|f(x)| = 20$

It is given that there are three distinct values of x which satisfy the equation $|f(x)| = 20$. Find the value of k and determine exactly the three values of x which satisfy the equation in this case.

State the value of k .

The following symbols may be useful: k

Give the rational value of x which satisfies this equation.

The following symbols may be useful: x

Give one of the irrational solutions for x in its simplest exact form.

The following symbols may be useful: x

Solve the inequality $|2x - 5| > |x + 1|$.

What form does your answer take? Choose from the list below, where a and b are constants and $a < b$, and then find a and/or b .

- ☐ $x < a$
- ☐ $x \leq a$
- ☐ $x > a$
- ☐ $x \geq a$
- ☐ $a < x < b$
- ☐ $a \leq x \leq b$
- ☐ $x < a$ or $x > b$
- ☐ $x \leq a$ or $x \geq b$

Write down the value of a .

Write down the value of b (or if your chosen form has no b , write "n").

The following symbols may be useful: n
