

Cambridge Physics Centre presents:

Why infrastructure matters and how data helps us to deliver better services from infrastructure

by Dr Jennifer Schooling OBE

Director of the Centre for Smart Infrastructure and Construction, University of Cambridge

The Code for the Built Environment, launched June 2021, is focused on the physical asset base. There are other things that cities and communities have to grapple with; the built environment does not exist in isolation. The UK government's target of Net Zero by 2050 is a positive step, but challenging to deliver because current carbon emissions are so high. Technology will assist in reaching this goal but behaviour change is also necessary, influencing people at a professional level, and making a difference through our jobs.

6pm on Tuesday 22nd February 2022

Pippard Lecture Theatre, Cavendish Laboratory,

J J Thomson Avenue, Cambridge

Directions, risk assessment and booking link at
