Express the following in completed square form.

Give your answers in the form $b(x+a)^2+c$, use improper (top heavy) fractions rather than mixed fractions in your answers.

Part A
$$2x^2 - 8x + 2$$

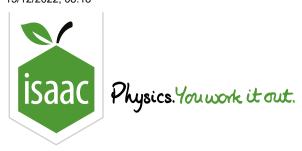

$$2x^2 - 8x + 2$$

The following symbols may be useful: x

Part B
$$3x^2 - 18x - 7$$

$$3x^2 - 18x - 7$$

The following symbols may be useful: x

Functions Graph Sketching

Essential GCSE Maths 27.4

Essential GCSE Maths 27.4

Without drawing graphs, find for each function:

(i) the y-intercept (ii) where the graph crosses the x-axis.

Part A
$$y=x^2+x-2$$

$$y=x^2+x-2$$

- (i) Find the y-intercept
- (ii) Where does the graph cross the x-axis?

Enter the lower value.

Enter the higher value.

Part B $y=x^2+6x+5$

$$y = x^2 + 6x + 5$$

- (i) Find the y-intercept
- (ii) Where does the graph cross the x-axis?

Enter the lower value.

Enter the higher value.

Part C
$$y=x^2-8x+15$$

$$y = x^2 - 8x + 15$$

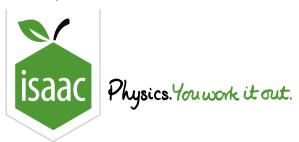

- (i) Find the y-intercept
- (ii) Where does the graph cross the x-axis?

Enter the lower value.

Enter the higher value.

Graph Sketching

Essential GCSE Maths 27.11

Essential GCSE Maths 27.11

The formula $s = ut + \frac{1}{2}at^2$ is used to calculate the height s of projectiles (such as balls) as a function of time.

Plot a graph of s against t for $0 \le t \le 7$, given that $u = 29.43 \, \mathrm{m/s}$ and $a = -9.81 \, \mathrm{m/s^2}$.

Part A What is the maximum height?

What is the maximum height reached? Give your answer to 3 s.f..

Part B How long to return to its starting height?

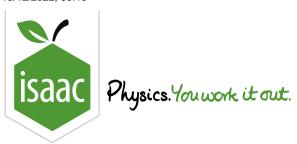

How long does a projectile modelled by this graph take to return to its starting height? You may assume the projectile was launched at t=0. Give your answer to 3 s.f..

Part C What is the relative position of the projectile?

At $t=7\,\mathrm{s}$, what is the height of the projectile relative to its starting position? Give your answer to 3 s.f..

Quadratics: Graphs and Discriminants 2ii

Quadratics: Graphs and Discriminants 2ii

The quadratic equation $x^2 + kx + k = 0$ has no real roots for x.

Part A Find discriminant

Write down the discriminant of $x^2 + kx + k$ in terms of k.

The following symbols may be useful: k

Part B Possible values of k

Hence find the set of values k can take.

What form does your answer take? Choose from the list below, where a and b are constants and a < b, and then find a and/or b.

- k < a
- $k \leq a$
- k > c
- $k \geq a$
- $\bigcirc \quad a < k < b$
- $a \le k \le b$
- k < a or k > b
- $\bigcirc \quad k \leq a \text{ or } k \geq b$

Write down the value of a.

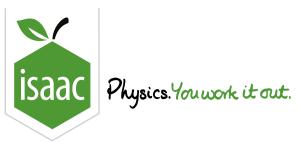

Write down the value of b (or if your chosen form has no b, write "n").

The following symbols may be useful: n

Simultaneous Equations

Linear-Quadratic 3

Linear-Quadratic 3

Solve the simultaneous equations $p^2 + 2pq + 4q^2 = 7$ and 2p = q + 1. (Where appropriate give your answer in the form of a proper or improper fraction.)

Part A p furthest from zero and q

Find the value of p furthest from zero given that $p^2+2pq+4q^2=7$ and 2p=q+1.

The following symbols may be useful: p, q

Find q for the value of p found above.

The following symbols may be useful: p, q

Part B p closest to zero and q

Find the value of p closest to zero given that $p^2+2pq+4q^2=7$ and 2p=q+1.

The following symbols may be useful: p, q

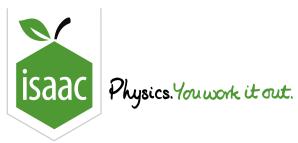

Find q for the value of p found above.

The following symbols may be useful: p, q

Quadratic Inequalities

Quadratic Inequalities

Solve the following quadratic inequalities.

Part A
$$3x^2 - 2x - 8 \le 0$$

Solve the inequality $3x^2 - 2x - 8 \le 0$. Firstly select the form of your answer from the choices given below, where a and b are constants and a < b, and then find a and/or b.

Select the form of your answer from the choices given below.

- x>b only
- $x \geq b$ only
- x < a or x > b
- $x \leq a$ only
- x < a only
- $a \le x \le b$
- a < x < b
- $\bigcirc \quad x \leq a \text{ or } x \geq b$

Given your deduction above, find a.

Given your deduction above, find b.

Part B $-2x^2 + 5 < 7x + 11$

Solve the inequality $-2x^2 + 5 < 7x + 11$. Firstly select the form of your answer from the choices given below, where c and d are constants, and then find c and/or d.

Select the form of your answer from the choices given below.

- x < c or x > d
- c < x < d
- $\bigcirc \quad x \leq c \text{ or } x \geq d$
- $c \le x \le d$
- x < c only
- $x \geq d$ only
- x > d only
- $x \leq c$ only

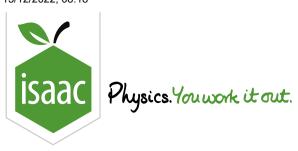

Given your deduction above, find c.

Given your deduction above, find d.

Quadratic Equations 5

Quadratic Equations 5

Show that the solution to the equation $mp^2+bp+k=0$ can be written as $p=-\gamma\pm\sqrt{\gamma^2-\omega^2}$.

Part A Find an expression for γ

Hence find an expression for γ in terms of one or more of the constants m, b and k in the original equation.

The following symbols may be useful: b, gamma, k, m, omega

Part B Find an expression for ω

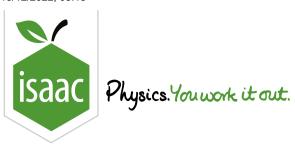

Also give an expression for ω in terms of one or more of the constants m, b and k.

The following symbols may be useful: b, gamma, k, m, omega

Linear-Quadratic 6

Linear-Quadratic 6

A particle of mass M, travelling at speed u, collides head-on and elastically with a stationary particle of mass m. After the collision the particles of mass M and of mass m travel at (non-zero) speeds v and w respectively.

By applying the laws of conservation of momentum and kinetic energy we can write down two simultaneous equations for the collision: Mu=Mv+mw and $\frac{1}{2}Mu^2=\frac{1}{2}Mv^2+\frac{1}{2}mw^2$

Part A w (speed of particle of mass m after collision)

Find an expression for w, the speed of the particle of mass m after the collision, in terms of u, M and m.

The following symbols may be useful: M, m, u, v, w

Part B v (speed of particle of mass M after collision)

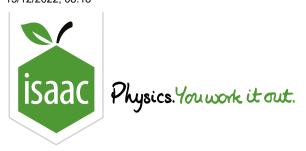

Find the corresponding expression for v, the speed of the particle of mass M after the collision, in terms of u, M and m.

The following symbols may be useful: M, m, u, v, w

Created for isaacphysics.org by Julia Riley.
